

ROUGH COUNTRY

SUSPENSION SYSTEMS®

921743000

2005-20 TACOMA 2" Molded Leveling Kit

Thank you for choosing Rough Country for all your suspension needs.

Rough Country recommends a certified technician install this system. In addition to these instructions, professional knowledge of disassemble/reassembly procedures as well as post installation checks must be known. Attempts to install this system without this knowledge and expertise may jeopardize the integrity and/or operating safety of the vehicle.

Please read instructions before beginning installation. Check the kit hardware against the parts list on the last page. Be sure you have all needed parts and know where they go. Also please review tools needed list and make sure you have needed tools.

PRODUCT USE INFORMATION

⚠ WARNING

As a general rule, the taller a vehicle is, the easier it will roll. We strongly recommend, because of rollover possibility, that the vehicle be equipped with a functional roll-bar and cage system. Seat belts and shoulder harnesses should be worn at all times. Avoid situations where a side rollover may occur.

Generally, braking performance and capability are decreased when larger/heavier tires and wheels are used. Take this into consideration while driving. Do not add, alter, or fabricate any factory or after-market parts to increase vehicle height over the intended height of the Rough Country product purchased. Mixing component brands is not recommended.

Rough Country makes no claims regarding lifting devices and excludes any and all implied claims. We will not be responsible for any product that is altered.

If question exist we will be happy to answer any questions concerning the design, function, and correct use of our products.

This lift was designed as a leveling kit. It provides 2" of lift to the front of the vehicle. The recommended tire size when using this kit is a 265/75R 17 on stock wheels. If wider tires are desired or wheels with something other than factory off-set please consult a tire and wheel expert to confirm fitment.

⚠ NOTICE

NOTICE TO DEALER AND VEHICLE OWNER

Any vehicle equipped with any Rough Country product should have a "Warning to Driver" decal installed on the inside of the windshield or on the vehicle's dash. The decal should act as a constant reminder for whoever is operating the vehicle of its unique handling characteristics.

INSTALLING DEALER - it is your responsibility to install the warning decal and forward these installation instructions on to the vehicle owner for review. These instructions should be kept in the vehicle for its service

Kit Contents:

Front Strut Extensions x2
 10mm-1.5 x 40mm x6
 10mm Washer x6
 10mm-1.5 Nuts x6

Tools Needed:

12mm Wrench
 14mm Socket
 17mm Socket
 17mm Wrench
 19mm Socket
 19mm Wrench
 16mm Wrench
 21mm Socket
 Hammer
 Needle Nose Pliers
 Sander

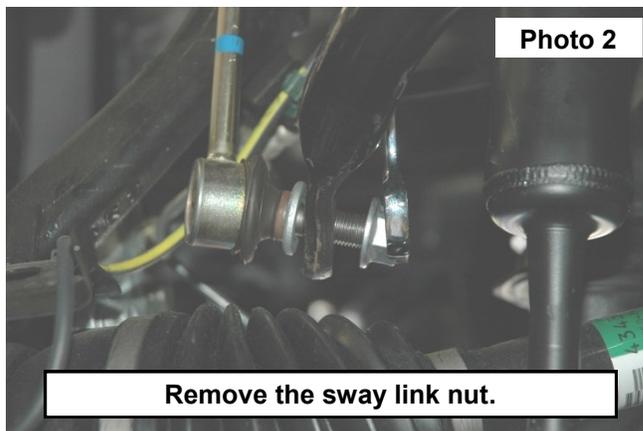

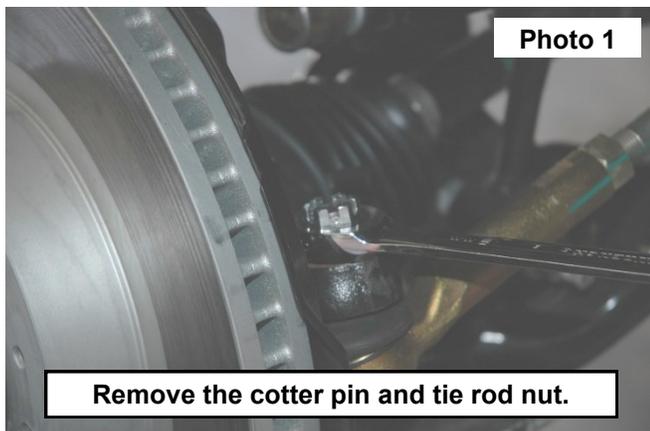

Torque Specs

Size	Grade 5	Grade 8	
5/16"	15 ft/lbs	20 ft/lbs	
3/8"	30 ft/lbs	35 ft/lbs	
7/16"	45 ft/lbs	60 ft/lbs	
1/2"	65 ft/lbs	90 ft/lbs	
9/16"	95 ft/lbs	130 ft/lbs	
5/8"	135 ft/lbs	175 ft/lbs	
3/4"	185 ft/lbs	280 ft/lbs	
MM	8.8	10.9	12.9
10MM	32ft/lbs	45ft/lbs	50ft/lbs

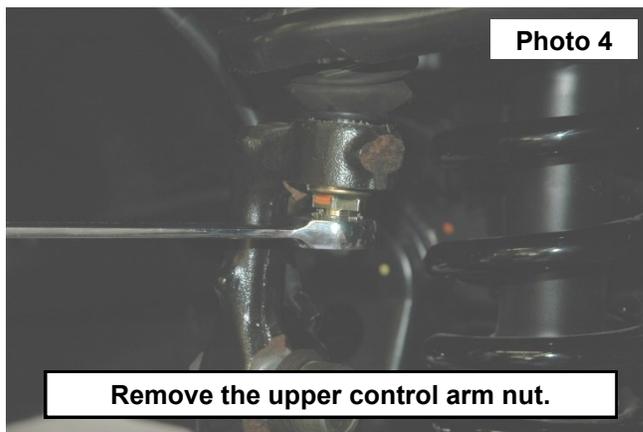

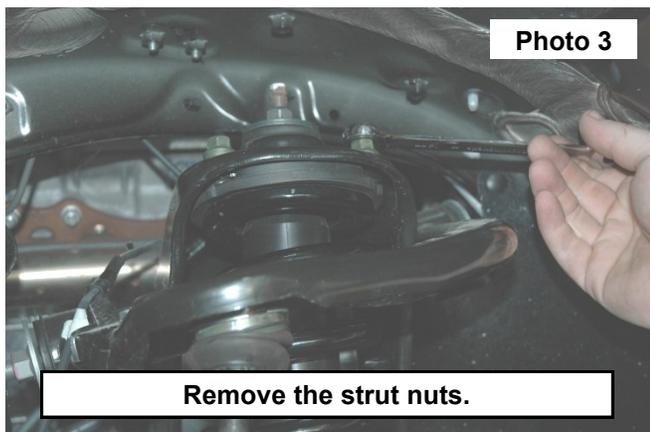

INSTALLATION INSTRUCTONS

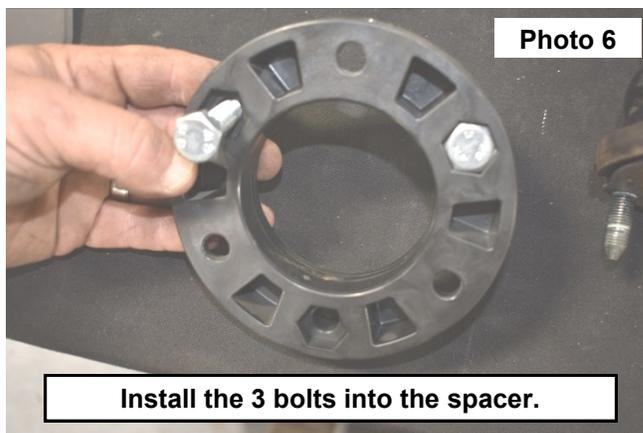

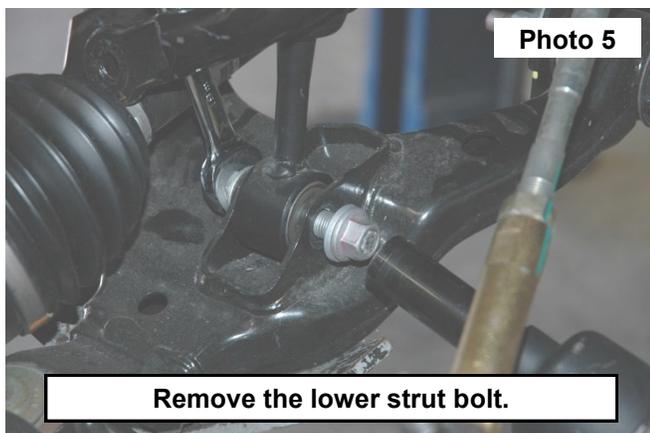

1. Jack up the front of the vehicle and support the vehicle with jack stands, so that the front wheels are off the ground.
2. Remove the front tires/wheels. Using a 21mm deep well socket.
3. Remove cotter pin from the outer tie rod end on the steering linkage. Using 19mm socket remove the nut. Using a hammer hit on the side of the cast knuckle to allow the tie rod end to separate from the knuckle. Remove the linkage from the knuckle. Push linkage forward to make room for installation. Retain factory nut and the cotter pin. **See Photo 1.**
4. Using a 17mm wrench, remove the sway bar bolts, allowing the sway bar to drop. Retain factory hardware. **See Photo 2.**

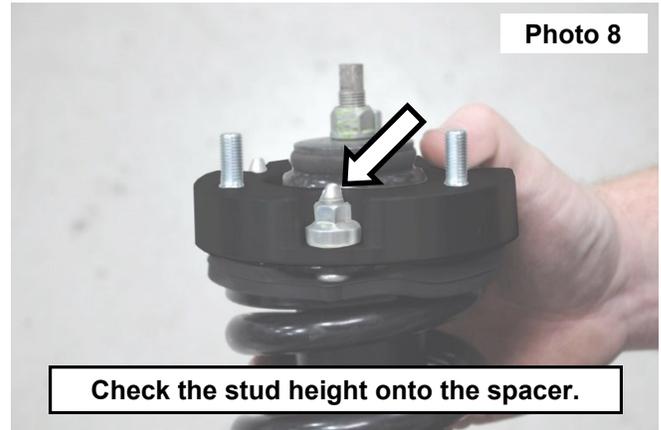

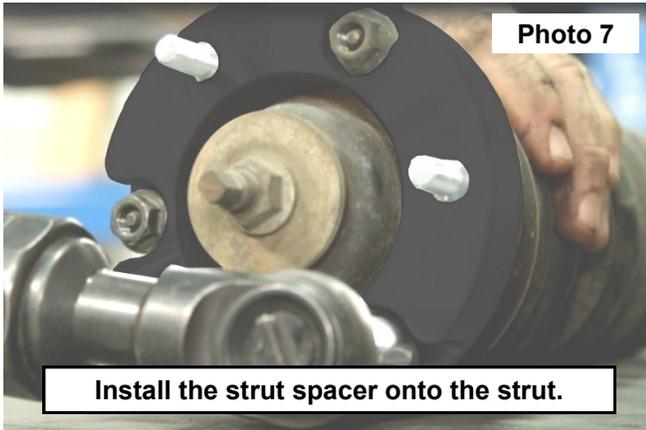

5. Using a 14mm socket, remove the strut nuts on the upper strut tower that holds the assembly in place. **See Photo 3.** One nut can be left on an upper stud to hold the strut in place.
6. Place jack stand under the knuckle for support. Using 19 mm socket remove nut from the ball joint on the upper control arm. Using a hammer hit the knuckle to allow the ball joint to separate from the upper control arm **See Photo 4.** Do not allow the knuckle to pull out far enough that it pulls the CV shaft out of the differential.

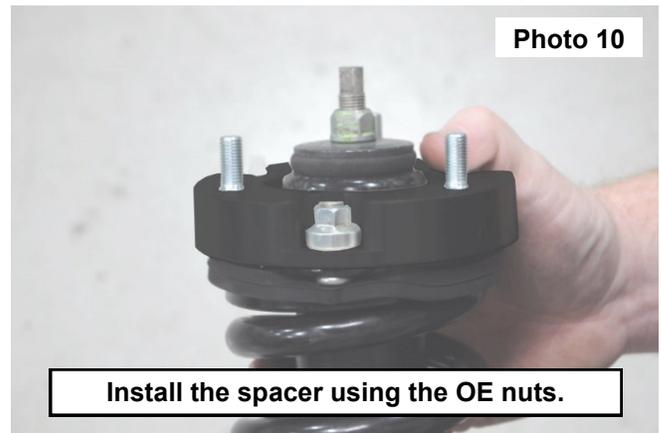

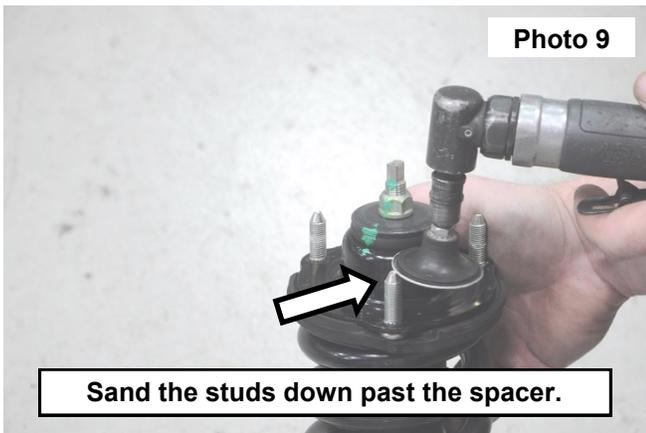

7. Using a 19mm socket and wrench, remove the strut bolt from the lower control arm and remove the strut assembly from the vehicle. Retain the factory lower hardware for reassembly. Note the direction of the bolt for reassembly. **See Photo 5.**
8. Install (3) of the supplied 10mm-1.5 x 40mm bolts into the lift spacer. **See Photo 6.**

9. Install Rough Country strut spacer on top of strut using factory hardware. Tighten using 14mm socket. Torque to 30ft/lbs. **See Photo 7.**
10. If the top of the factory studs stick up past the spacer you will need to grind/sand them down below the top of the spacer. **See Photos 8 and 9.**

11. Once the studs have been sanded down install the strut spacer onto the strut and secure using the OE nuts and tighten using a 14mm socket. **See Photo 10.**

12. Install the strut and spacer assembly in the upper strut mount and secure with (3) of the supplied 10mm washers and (3) of the 10mm-1.5 nylock nuts. Tighten with a 17mm wrench. Torque to 30ft/lbs. **See Photos 11 & 12.**

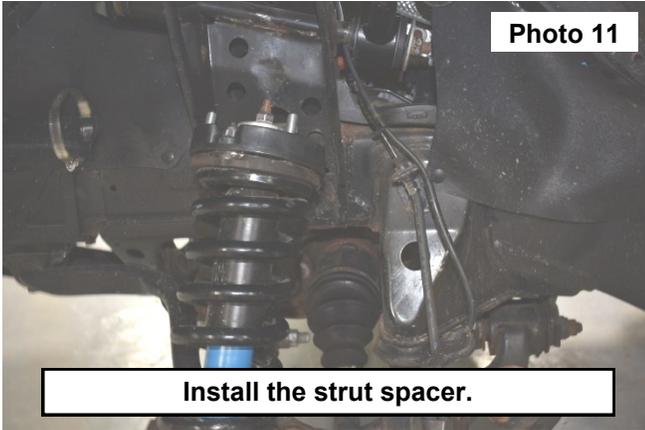

Photo 11

Install the strut spacer.

Photo 12

Tighten the strut to the vehicle.

13. Position the strut assembly to reinstall the lower strut bolt in its original position that it was removed. Using original hardware and a 19mm socket torque to 100ft lbs.
14. Using a floor jack, raise the lower control arm and connect the upper ball joint on the upper control arm to the spindle. Using a original nut and a 19mm socket, torque to 40ft lbs.
15. Reinstall the tie rod end off steering linkage into knuckle using original factory nut using a 19mm socket torque nut to 65ft. Lbs. Install factory cotter pin.
16. Repeat steps 3-12 on opposite side of vehicle.
17. Using 17 mm wrench reinstall sway bar links using factory hardware. Torque to 52 ft. lbs.
18. Install the wheels / tires. Using a 21mm socket. Torque to 85 ft. lbs. With vehicle on the ground, check the clearance between the tire and upper control arm to make sure the arm does not rub the tire.
19. Jack up the vehicle and remove the jack stands. Lower the vehicle to the ground and re-check all bolts, to assure they are tight.
20. This vehicle must have a front-end alignment after installation of the suspension kit. The vehicle will be aligned to factory specs.
